TEKS

Fish are aquatic animals which belong to the group of vertebrates. There are more than 30.000 species of fish in the world. Some of them live in freshwater and some other live in an ocean. All of them breathe by using a special organs known as "gills". They consume various of food such as plants, worms, and sometimes another fish with smaller body.

Each species of fish have their own maximum measurement. It can range from 8 mm to 16 m. Most of them have scaly skin with various colors. Some of them even have a unique pattern on their scales which makes them more valuable for humans as a decorative items. They have some sets of muscles on their backbone which allow them to move their body and create ripples in the water that will push their body forward so they can swim. Each of them also have some fins on their body to navigate their movement. Many of them have an internal organ called as "swim bladder" which contains gases that prevent them from sinking.

Fish contain a lot of good nutrient for the body such as protein, omega 3 and vitamine. Since a long time ago, some species of fish, especially the freshwater fish, has been breed in a fish farm in order to fulfill the needs of human. Beside that, some fish such as koi fish and Betta fish are famous for their beauty and they are kept in a pond or in an aquarium as a decoration.
